

ROMAN BLIND (CASCADE)

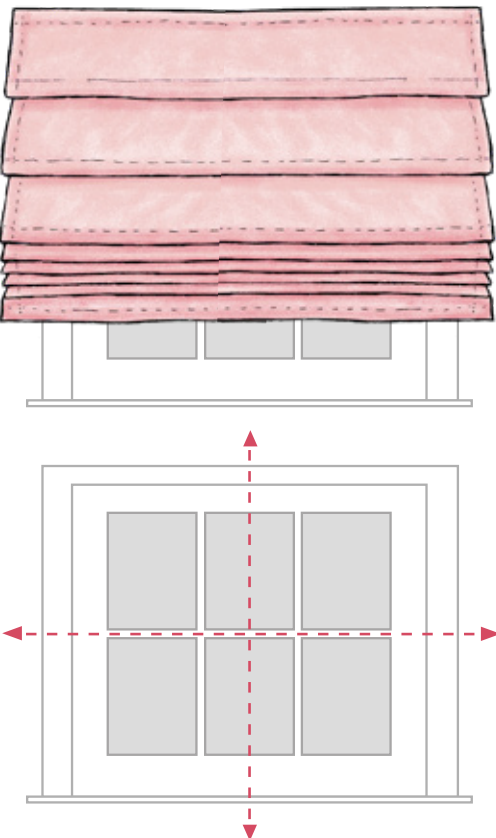

Roman Blinds

Blinds may be fitted either inside or outside the window recess. It will be necessary to fit the blind outside the recess if:

- The recess is less than 7.5cm deep
- The window opens inwards
- The window is not straight (width or height varies by more than 2cm)

Outside window recess

Measure the width and drop around the recess. This measurement is entirely up to you, we recommend that you allow the blind to extend approximately 10cm either side of the window and 10cm above and below the window. If you would like your blind to be fitted onto a wooden baton above the window, simply measure from the top of the baton, to the point where you want your blind to finish.

Inside window recess

Ensure that your recess is not obstructed in any way that would stop the blind being lowered or drawn correctly.

Measure the width from wall to wall and the drop in at least three places. Use the smallest width and drop measurement of the three. Please note: We will deduct approximately 2cm from the width measurement you provide for inside recess.
